JAMA Dermatology

Mission Statement: JAMA Dermatology publishes information concerning the skin, its diseases, and their treatment. Its mission is to elucidate the structure and function of the skin and its diseases and to improve the treatment or prevention of skin disorders. This journal has a particular interest in publishing clinical and laboratory studies that reveal new information pertinent to the interests and needs of the medical dermatologist, dermatologic surgeons, and all those concerned with state-of-the-art care of cutaneous disease. We believe that knowledge derived from well-designed clinical trials and studies of cost-effectiveness are especially important for improving the practice of dermatology. Studies that increase the understanding of the outcome of treatment or the means by which the burden of dermatologic disease can be measured and reduced are expected to promote the health of patients with skin diseases. The journal regularly publishes reports on clinical investigations, editorials, and reviews. It also features reports and discussions on clinicopathologic correlations, clinical disorders of unique didactic value, pharmacologic, and ethical moral, socioeconomic, and political issues.
