Mission Statement JAMA Dermatology publishes information concerning the skin, its diseases, and their treatment. Its mission is to explain the structure and function of the skin and its disorders to physicians, researchers, and others concerned with state-of-the-art care of cutaneous disease. We believe that knowledge derived from well-designed clinical trials and studies of cost-effectiveness are especially important for improving the practice of medicine. Studies that increase the understanding of the outcome of treatment or the means by which the burden of dermatologic disease can be measured and reduced to promote the health of patients achieve special priority. The journal regularly publishes reports on clinical investigations, editorials, and reviews. It also features reports and discussions on cosmetically important; correlations, clinical disorders of unique diagnostic value, pharmacology, medical, and surgical therapies, and ethical, moral, social, and political issues.
