

In Reply We recognize that the subject of Medical Assistance in Dying (MAID) is controversial and that, because the stakes are high, there are a wide range of strongly held opinions and beliefs about it. The letters responding to our Perspective¹ reflect that variation. We firmly respect the right of everyone to hold and express those opinions, including the right to opt out of providing MAID if one objects. We point out that Canada's law does allow physicians to decline participation in MAID but mandates referral to other physicians for assessment.
