

CORRECTION

Error in Abstract Results: In the Original Investigation titled “Evaluating the Association of Clinical Characteristics With Neutralizing Antibody Levels in Patients Who Have Recovered From Mild COVID-19 in Shanghai, China,”1 published online August 18, 2020, there was an error in the last sentence of the Results section of the Abstract. The phrase indicating that the NAb titers were not correlated with lymphocyte counts should have read “negatively correlated.” This article was corrected online.

Errors in the Text: In the Editorial titled “Multivessel or Culprit Vessel–Only Percutaneous Coronary Intervention for Patients With Acute Myocardial Infarction and Cardiogenic Shock: Real-World Evidence in Support of CULPRIT-SHOCK,”1 published online August 24, 2020, there were 2 errors in the third paragraph. First, CULPRIT-SHOCK found “that culprit vessel–only stenting in patients who are clinically unstable was associated with an 8.3% absolute decrease in 30-day mortality compared with multivessel PCI,” not culprit vessel–only PCI. Second, in the last sentence of the third paragraph, “patients and cardiogenic shock and AMI” should have been “patients with cardiogenic shock and AMI.” This article has been corrected online.
