Correction

Errors in the Figure and Table 4

In the Original Investigation titled “Association of Attending a High-Performing High School With Substance Use Disorder Rate and Health Outcomes in Young Adults,”1 published on October 6, 2022, there were errors in the numbers of participants in the control and intervention groups at grade 12 listed in the Figure. In addition, the self-efficacy and hopelessness outcomes shown in Table 4 are scores rather than percentages. This article has been corrected.1
