hazard ratios (HRs) reported in the text and Table 3. We also discovered a glitch with our use of SPSS software, which sometimes calculates the reciprocals if the parameter is not defined as a categorical variable, depending on the codes defined for the parameter. Thus, in several instances, we erroneously reported the reciprocal HR. All the HRs have been double-checked and corrected, and I have reviewed the raw data to verify that all analyses were correct.

In addition, the labels for the curves in Figures 1C and 2C were flipped. Finally, during the editing process, the abbreviation BM was erroneously expanded to “bone metastases” rather than “brain metastasis” in several places.

None of these errors affect the interpretations of conclusions of our study. We have requested that the article be corrected online.2

Errors in Hazard Ratios, Labels in Figures, and Text: In the article titled “Multi-institutional Analysis of Prognostic Factors and Outcomes After Hypofractionated Stereotactic Radiotherapy to the Resection Cavity in Patients With Brain Metastases,” published online October 15, 2020, and also in the December 10, 2020, issue of JAMA Oncology, discrepancies between the findings described in the text and some hazard ratios (HRs) were reported in the text and Table 3. In addition, a software glitch led to reporting of reciprocal HR, and the labels for the curves in Figures 1C and 2C were flipped. Finally, during the editing process, the abbreviation BM was erroneously expanded to “bone metastases” rather than “brain metastasis” in several places. Most importantly, none of these errors affect the interpretations of conclusions of the study. This article was corrected online, and a letter of explanation has been published by the first author.2

Error in Funding/Support: In the Original Investigation titled “Association of Reduced-Intensity Conditioning Regimens With Overall Survival Among Patients With Non-Hodgkin Lymphoma Undergoing Allogeneic Transplant,”1 published online June 4, 2020, and in the July 2020 print issue, grant U24CA233032 from the National Cancer Institute was removed from the Funding/Support section. This article has been corrected online.
