CORRECTION

Incorrect Description of Events Leading to Presentation to Clinic: In the article titled “Photophobia After Laser Eyebrow Epilation,”1 the description of events leading the patient to present to the clinic for a second opinion were incorrect. Originally, the description read, “During the [eyebrow laser epilation] session, she removed the metal eye shield for better exposure, immediately after which she developed eye pain and blurred vision.” The text has been updated to read, “...the physician assistant removed the metal eye shield for better exposure, immediately after which the patient developed eye pain and blurred vision.” The article was corrected online.

Pervasive Errors in the Key Points, Abstract, Results, Discussion, Table 3, and eTable in the Supplement: In the Original Investigation titled “Association of Maternal Preeclampsia With Infant Risk of Premature Birth and Retinopathy of Prematurity,” a programming error led to a pervasive series of errors regarding odds ratios, adjusted odds ratios, and 95% confidence intervals in the Key Points, Abstract, Results, Discussion, Table 3, and eTable in the Supplement. These errors did not affect the conclusions of the article. A Letter of Explanation2 has been published that details the source of these errors. This article has been corrected online.

Error in Figure: In the Original Investigation titled “Ocular Antihypertensive Medication Use After iStent Implantation Concurrent With Cataract Surgery vs Cataract Surgery Alone in a Large US Healthcare Claims Database,”1 published online September 27, 2018, there was an error in Figure 1. The colors of the Figure key were reversed: white should be “≥3” medications, light gray should be “2” medications, dark gray should be “1” medication, and dark blue should be “0” medications. This article was corrected online.
