Conflict of Interest Disclosures: None reported.

CORRECTION

Errors in Byline and Author Contributions: In the Original Investigation titled “Effect of Family Navigation on Diagnostic Ascertainment Among Children at Risk for Autism: A Randomized Clinical Trial From DBPNet,”1 published online January 11, 2021, there was an error in the author byline and in the Author Contributions. An author was omitted in error by the corresponding author. There should be a total of 20 authors, and the 15th should be Ivys Fernandez-Pastrana, JD. She is affiliated with the Department of Pediatrics, Boston Medical Center, Boston, Massachusetts, and has no Conflict of Interest Disclosures. Her name has also been added to the Author Contributions. This article was corrected online.

Error in Figure: In the Research Letter entitled “Prevalence of Spanking in US National Samples of 35-Year-Old Parents From 1993 to 2017,”1 a percentage symbol was erroneously included in the y-axis label of the figure. This symbol was removed and the y-axis label now reads “Weighted prevalence, SE.” This article was corrected online.

Error in Methods Section and Figure: In the Original Investigation titled “Assessment of Exposure to High-Performing Schools and Risk of Adolescent Substance Use: A Natural Experiment,”1 there were errors in the Methods section and Figure 1. In the Methods section, the number of potential participants identified should be 1995 instead of 1996, and the number of ineligible participants should be 486 instead of 487. Likewise, in Figure 1, the total number of potential participants should be 1995, and the number of ineligible participants should be 486. In addition, the number of individuals unable to be contacted or had moved should be 319 rather than 320. Under intervention baseline, the number of individuals who were unable to be reached and individuals who refused were switched. This article was corrected online.

Clarifications of Terms and for Interpreting Incidence Rate Ratios: In the Original Investigation, “Association of the Timing of School Closings and Behavioral Changes With the Evolution of the Coronavirus Disease 2019 Pandemic in the US,”1 published online first on February 22, 2021, in JAMA Pediatrics, there were errors in the text for description of the incidence rate ratios (IRRs). In the Abstract and main text, “delay of 1 day” and “day of delay” have been corrected to “advance of 1 day” and “each day earlier.” The term “days since” has been corrected to “each day earlier” in the text and defined in the legend of the Table as “how much earlier in the pandemic either school closures, gathering bans, or work reductions happened. Each 1-unit increase in a ‘days since’ variable represents 1 day earlier that the change happened.” These corrections do not affect any of the IRRs or other data. The article has been corrected online.
