CORRECTION

Errors in Text and Table: In the Original Article titled “Cognitive Reactivity to Sad Mood Provocation and the Prediction of Depressive Relapse,” published in the July 2006 issue of JAMA Psychiatry (then Archives of General Psychiatry), there were errors in the text and in Table 1. In the Results, the numbers of participants randomly assigned to antidepressant medication (ADM) and cognitive behavior therapy (CBT) were reversed; the correct numbers are 152 for ADM and 149 for CBT. In Table 1, the number of patients in the CBT treatment dropouts group were erroneously reported, and data for CBT treatment dropouts were recalculated. A discrepancy in the duration variable was also found and data across groups were recalculated. A Letter of Explanation has been published that explains the errors. This article was corrected online.
