Conflict of Interest Disclosures: Dr Howard reported grants from Blue Cross Blue Shield of Michigan Foundation and National Institute of Diabetes and Digestive and Kidney Diseases outside the submitted work. No other disclosures were reported.

Editorial Note: This letter was shown to the corresponding author of the original article, who declined to reply on behalf of the authors.

CORRECTION

Error in Abstract: In the Original Investigation titled “Long-term Outcomes Following Kidney and Liver Transplant in Recipients With HIV,” published on January 5, 2022, there was an error in the Abstract. In the sentence “Patient survival was 60.3% (95% CI, 49.0%-74.1%) for HIV-negative LT recipients, and 65.3% (95% CI, 54.4%-78.2%) for HIV-positive LT recipients at 15 years posttransplant,” the patient survival and 95% CIs were updated so the sentence now reads “Patient survival was 75.7% (95% CI, 71.8%-79.8%) for HIV-negative LT recipients, and 70.0% (95% CI, 60.6%-80.8%) for HIV-positive LT recipients at 15 years posttransplant.” The article was corrected online.
